SPULBOI

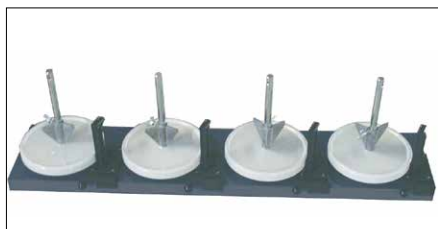

The SPULBOI storing system is mainly used in work shops, shops or production area. It allows clearly ordered storing, twisting-free material payout from the spools and cutting-to-length according to demand. The special advantage of some of these racks is the individual storing of each spool which allows quick and comfortable exchange of the single spools. Due to the individual suspension each spool is slightly braked and the spool stops immediately upon material payout in order to avoid uncontrolled reeling-off after dispensing. **Attention:** only suitable for manual unwinding!
